### **TECH AND INSTALLATION**

<https://hvgfacades.com.au/mondoclاد/mondoclاد-techinstallation/>

## BENEFITS

**100% non-combustible to AS1530.1**  
This means that MondoClad® is NCC compliant, streamlining the building approvals process.

**Compliant to FP1.4 for weatherproofing**  
MondoClad® has been tested to AS4284 and meets the criteria of the FP1.4 performance requirement for weatherproofing.

**Custom sizes, colours and finishes**  
MondoClad® offers custom colours and sheet sizes, including oversize sheets, to ensure your design is achieved.

**15-year warranty**  
MondoClad® offers high colour retention and will not oxidise over time. Warranty available on application and subject to approval. Contact our sales team for further information.

**PVDF finish**  
Superior long lasting finish, no cracking when fabricated.

**High quality marine grade aluminium**  
MondoClad® is designed to be corrosion resistant, meaning it will not oxidise, making it an ideal choice for all locations.

**Easy to fabricate**  
When folding, routing and cutting.

**Stocked in Australia**  
As MondoClad® is stocked locally, there are reduced lead times for delivery.

**Technical support**  
Our team of industry professionals are available to provide their expertise and technical knowledge to assist in your product-related enquiries.

**Competitively priced**  
MondoClad® is an affordable high-quality option.

## NON-COMBUSTIBLE ALUMINIUM PANELS

MondoClad® solid aluminium panels set a new standard in high-performance, quality facades. With its exceptional fire performance, this is a non-combustible solution designed to last. Offered in an extensive range of colours, these pre-painted panels are suited to a range of applications from high-rise and education to health care and residential developments. Exclusively distributed by HVG Facades, MondoClad® is now used in new constructions and the recladding of existing projects across Australia.

### A product of enduring style

MondoClad®'s wide range of finishes and sizes means that even the most complex architectural designs can be achieved. Stocked locally in numerous colours and sizes, MondoClad® also offers custom colours and measurements on request.

MondoClad® is non-combustible, and can be easily fabricated into cassettes. This combination of low-maintenance, high level of safety and durability means that architects, designers, developers, builders and contractors can specify confidently without compromising design. The superior PVDF architectural paint finish of MondoClad® also ensures UV stability and colour retention, so that architectural designs will stand the test of time.

### A non-combustible solution that is designed to last

MondoClad® offers exceptional quality and fire performance. It is categorically non-combustible, in accordance with AS1530.1 standards, which sets it apart from many other market offerings.

Utilising a corrosion-resistant, marine-grade alloy, MondoClad® is ideal for use in harsh Australian conditions. The high-quality paint finish provides modern colour options with durable UV resistance and gloss retention.

## MONDOCLAD® TECHNICAL DATA SHEET

Properties	Units	Values
Alloy		5052
Standard thickness	mm	3
Painted weight	kg/m²	8.31
Raw density	kg/m³	2680
Indicative minimum radius	mm	4.5
Tensile strength	MPa	215-265
0.2% Proof stress	MPa	>160
Elongation	%	7
Linear thermal expansion		2.4mm/m at 100° temperature difference
Melting range	°c	607-650
Modulus of elasticity - Tension	GPa	69.3 @ 20°C
Modulus of elasticity - Torsion	GPa	25.9 @ 20°C
Modulus of elasticity - Compression	GPa	70.7 @ 20°C
Thermal conductivity	W/m.k	138 @ 25°C
Electrical resistivity	micro-ohm.m	70.7 @ 20°C
Electrical conductivity - Equal volume	MS/m	20 @ 20°C
Electrical conductivity - Equal weight	MS/m	67 @ 20°C
Sound adsorbtion factor	NCR	0.05
Sound reflection	%	95

## FIRE PERFORMANCE

MondoClad® solid aluminium panels are non-combustible when tested to AS1530.1.

Test standard	Result		
AS1530.1	Non-combustible		
AS1530.3	Pass	Ignitability index	0
	Pass	Heat evolved	0
	Pass	Spread of flame	0
	Pass	Smoke developed	2

# FABRICATION

MondoClad® sheets can be fabricated into panels using various techniques.

**Circular Saw**  
For best results, a track guided circular saw is recommended. It is important to discuss blade selection with manufacturer. Hand folding is generally achievable without the need for bending equipment. A depth gauge roller suitable for 3mm thickness may be required.

**Vertical Panel Saw**  
This type of saw can cut and route MondoClad®. Please seek manufacturer's advise in the selection of an appropriate blade. Existing vertical saws can be retro fitted with a variable speed driver controller and lubricant misting equipment. When creating a V-groove for folding, the minimum thickness left in the bottom of the groove should be 0.7mm

**CNC Router**  
A V-groove with a flat base of 3mm is recommended to a maximum depth of 2.2mm. Spindle rotation speeds and feed rates are machine dependant and should be discussed with machine manufacturers. A lubricant mister is recommended when fabricating MondoClad®. For optimum fabrication results, we recommend consulting machine manufacturers and tooling supply companies.

**Folding**  
After the V-groove has been formed, fold the return leg back in one movement. It is recommended that a portable folding tool be used for small panels and a folding machine/bed for larger format panels. The initial folded angle should slightly more than the final angle required.

**Shearing**  
MondoClad® can be guillotined to the required size. Ensure the cut material is captured to prevent damage.

**Roll Bending**  
To create curved surfaces, use a suitable bending machine. Safeguard the material by maintaining the protective film. Make certain the rollers are clean and dent-free. The minimum bending radius should be no more than 15 times the thickness.

**Drilling**  
A high quality HSS centre point drill bit is suitable for drilling MondoClad®.

**Fixing**  
You can rivet MondoClad® using blind and solid rivets. Always consider the effects of thermal expansion and potential building movement. Stainless steel screws should be used with all MondoClad® products. Always consider the effects of thermal expansion and the possibility of building movement.

**Welding**  
The common methods for welding MondoClad® are TIG and MIG. It is recommended to consult with your local welding specialist for advice.

**Perforating**  
MondoClad® can be perforated by punching, drilling or milling. Contact HVG Facades to discuss the pattern and open area you are seeking to achieve.

*It is strongly recommended that you consult with machinery manufacturers and tool suppliers to secure the best fabrication result. We suggest that you conduct preliminary tests and trials prior to commencing the production of panels.*

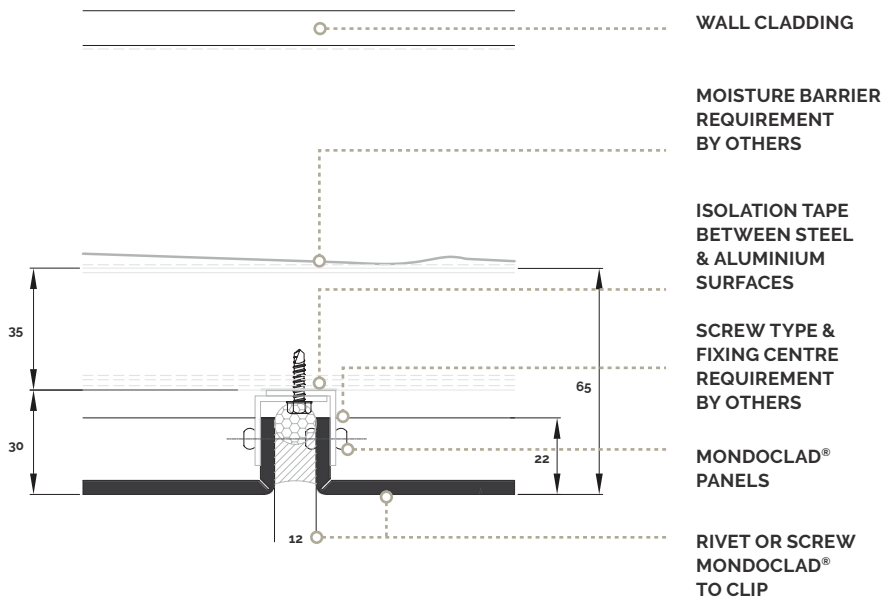

# FIXING DETAILS

Horizontal Joint Z Angle-Route

# CLEANING INFORMATION

To maintain the appearance of the MondoClad® panels we strongly recommend regular cleaning with appropriate mild detergents ensuring that the detergent is thoroughly rinsed off the facade.

Never use cleaning products that are highly alkaline or acidic and avoid abrasive materials and paint dissolving solvents.

Facades that are located near a marine or industrial environment may need more frequent cleaning periods.

# SUSTAINABILITY

MondoClad® is an excellent choice to enhance the sustainability of buildings due to its exceptional corrosion resistance and recyclability.

MondoClad® solid aluminium panels are 100% recyclable offering an eco-friendly solution.

Up to 95% less energy is required in the recycling of aluminium compared to other primary metals leading a reduction in emissions.

# ZINTL®

## PREMIUM INTERLOCKING ALUMINIUM CLADDING SYSTEM

The ZINTL® premium solid aluminium interlocking cladding system delivers a range of powder-coated colours across a range of solid, anodised and wood grain finishes.

ZINTL® is certified non-combustible to AS1530.1 – offering number of profiles with over 150 colours to select from. The colour matched ancillaries provide consistency and the interlocking joints assist in easy installation both vertically and horizontally.

### TECH AND INSTALLATION

<https://hvgfacades.com.au/zintl/zintl-techinstallation/>

PREMIUM INTERLOCKING  
ALUMINIUM CLADDING SYSTEM

# ZINTL® BENEFITS

### Customisable

With its six unique profile designs and broad range of finishes and colours, ZINTL® enhances any project.

### Non-combustible to AS1530.1 and AS1530.3

ZINTL® is NCC compliant, a rating that helps streamline the building approvals process.

### Weatherproof AS4284

Compliant to FP1.4 for weatherproofing ZINTL® has been tested to AS4284 and meets the criteria of the FP1.4 performance requirement for weatherproofing.

### Australian Made and Owned®

ZINTL® premium interlocking weatherboard is Australian Made and Owned®.

### Easy to install

ZINTL®'s interlocking system is easy to use, which means faster installation, improved site costs and superb alignment.

### Powder coated finish

ZINTL® offers high colour retention and a superior long-lasting finish through trusted Interpon and Dulux ranges.

### High quality marine grade aluminium

ZINTL® is designed to be corrosion resistant, ensuring it will not oxidise over time and making it an ideal choice for all locations.

### Expert advice

ZINTL® offers a team of experts with strong industry, design and technical knowledge available to assist with projects.

### Warranty\*

ZINTL® surface finish warranty is up to 30 years, based on powder coat range. Project warranties available with pre-approval. Please refer to the ZINTL® 'Care and Maintenance' brochure for further information.

# DESIGN PERFORMANCE

ZINTL® aluminium cladding system is a timelessly elegant and enduring material that offers a world of design possibilities. This high-performance cladding is available in a range of interlocking weatherboard profiles to suit any project.

ZINTL® provides specifiers with facade profiles that are versatile and non-combustible, certified to AS1530.1 and AS1530.3. Combining sophisticated style, extraordinary fire performance and efficient installation, this cladding system is ideal for residential, commercial, industrial, education, sporting and health care projects. Designed for quick and cost effective installation, ZINTL® requires minimal ongoing maintenance and can be customised to suit each project.

ZINTL® aluminium cladding is offered in a wide range of Interpon and Dulux powder coated finishes as well as a selection of anodised and wood grain architectural finishes, providing a beautifully refined aesthetic. With its mix of natural, bold and subtle hues, ZINTL® is perfect for any budget or environment. Its durability makes it particularly well suited for coastal properties and high traffic areas.

# FIXING DETAILS

# ezy HD<sup>2</sup>

Australian Made and Owned®, ZINTL®, Premium Interlocking Cladding System uses ezy HD<sup>2</sup> technology that will provide architects with a realistic look and feel and a superior exterior performance.

ezy HD<sup>2</sup> wood effect coating provides maximum definition and durability using the advance powder-on-powder coating system. This system is unique to the Australian market and produces a finish with a realistic woodgrain look and feel.

ezy HD<sup>2</sup> finishing was created from technology developed and patented in Italy for the decoration and protection of architectural aluminium with a natural wood effect. ezy HD<sup>2</sup> is the first system to obtain a realistic wood effect coating using a powder-on-powder process that ensures high definition and a highly durable finish for your

product. ezy HD<sup>2</sup> is the only wood effect coating in Australia that can offer a 15-year colour and 25-year film integrity warranty for both the base coat and the grain coat.

Powder coatings that pass AAMA2604 standards are highly recommended for installations in coastal areas, in environments with high humidity, pollution and salinity and in all areas characterised by exposure with annual average solar radiation from moderate to extreme, ideal for the Australian landscape.

The powder-on-powder process is more durable and less subject to differential fading in comparison to the wood effect products obtained by the sublimation wood effect finish. This is because the grain is the same product and same quality as the base coat ensuring that they both weather at the same time.

## CLEANING INFORMATION

To ensure ZINTL® is maintained to the highest standard, regular cleaning is recommended.

Further information can be found in the ZINTL® 'Care and Maintenance' brochure.

## A SUSTAINABLE CHOICE

ZINTL® aluminium cladding is an excellent choice to enhance the sustainability of buildings due to its exceptional corrosion resistance and recyclability.

Our ZINTL® solid aluminium boards are 100% recyclable, offering an eco-friendly solution. Up to 95% less energy is required in the recycling of aluminium in comparison to other primary metals, ensuring a reduction in emissions.

PREMIUM SNAP-IN  
ALUMINIUM BATTEN SYSTEM

## ZINTL® BATTEN SYSTEM

### Applications

ZINTL® Batten is a versatile architectural facade system suitable for use in residential, commercial, industrial, education, sporting and health care projects.

Whether horizontally or vertically aligned, with its clean lines and contemporary look, ZINTL® Batten will bring a sophisticated and aesthetic impression to any architectural environment.

ZINTL® Batten comes in two different widths, 25mm and 50mm, as well as a selection of various height options to choose from.

ZINTL® Batten uses a simple 'snap in' locking system to aid the installation. Simply mount the batten inner then firmly snap on the batten outer until a 'click' is heard.

### Materials

ZINTL® Batten architectural battens are extruded from 6063-T6 premium grade aluminium alloy. High corrosion resistance and weatherability, perfect for commercial applications. Standard Stock Length: 6.5 metres

### Creativity

With a wide range of Wood Grain and Powder Coating finishes and varying size options available, ZINTL® Batten allows specifiers to realise their creative vision and bring their designs to life.

In the past such freedom could only be achieved with apprehension, resulting in inconsistency due to the nature of custom manufacturing.

With ZINTL® Batten's standard sizes and modularity, it allows HVG Facades to supply an accurate and consistent architectural batten system.

### Installation

Installers must consult with their Architect, Engineer or Building Designer to ensure that their specific installation will be suitable and compliant with all local building regulations and requirements.

This is essential due to the various installation methods by which the ZINTL® Batten Systems can be applied, and the various requirements for each building type and location. HVG Facades will not be responsible nor liable for any design or installation that does not comply with all local building code regulations or specified engineering requirements.

##### TECH AND INSTALLATION

<https://hvgfacades.com.au/swisspearl/swisspearl-techinstallation/>

European design.  
For the Australian landscape.  
Style. Structure. Substance.

# About Swisspearl

Swisspearl® sets an unparalleled standard in high-density fibre cement cladding. Available in an extensive range of colours and finishes for architectural flexibility and designed to provide maximum fire resistance for peace of mind, it's the ideal option when choosing fibre cement panels for your next project.

## Swisspearl® allows you to enjoy European design for the Australian landscape.

With a range of colours, textures and finishes that's unsurpassed, as well as the versatility of custom fabrication to suit your individual needs, Swisspearl® offers endless design possibilities.

Non-combustible, hard-wearing and impact resistant, Swisspearl® high-density fibre cement panels have been designed to withstand harsh Australian conditions.

Manufactured in Switzerland with a high level of environmental awareness and installed using natural and energy efficient methods, Swisspearl® improves building exteriors both aesthetically and ecologically.

Swisspearl® is ideal for new projects as well as recladding applications, making it perfect for internal and external cladding of aged care, healthcare, government, education, commercial and residential projects.

When it comes to style, structure and substance, no one comes close to Swisspearl®.

# Swisspearl features and benefits

### Extensive colours and finishes

With more than 90 stunning, coloured through standard finishes divided amongst seven distinct ranges (many with their own unique finishes) Swisspearl® even offers custom colour options. Choose from multiple sheet sizes and the flexibility to cut to your individual specifications.

### Classified non-combustible

A premium, non-combustible and NCC compliant product, allows architects and builders to feel confident they've chosen the right product for the project.

### Highly durable and impact resistant

Tested against extreme heat, freezing temperatures and large hail impact. They are designed to resist rot. The hard-wearing, durable nature of Swisspearl® provides proven performance in all weather conditions.

### Low maintenance and UV resistant

With a premium surface finish that's low-maintenance and highly resistant to harmful UV rays, designed to withstand Australia's harsh climate, even in the most remote areas.

### Ideal for recladding

It's the ideal choice for rectification and recladding works where improved fire resistant cladding products are required.

### Local sales and technical support

Swisspearl® is stocked locally, so it's easily accessible. We have technical expertise and sales support in each state able to assist with your specifications and order enquiries.

### Sustainable and environmentally friendly

Manufactured with a high level of environmental awareness, are made from 95% cement, pulverised limestone, water and air.

Fire performance	Suitable where non-combustible materials are used in accordance with local building regulations		

## Fire performance

Swisspearl® high-density fibre cement panels help to provide a definitive solution to fire compliance. Classified as non-combustible under C1.9(e)(iv) of the National Construction Code (NCC) deemed-to-satisfy provisions and satisfying the requirements of AS2908.2 (classification of cellulose cement products-flat sheets).

With its fire-resistant properties, Swisspearl® offers an efficient pathway to compliance with the NCC.

# Swisspearl Rear Ventilated Facades

Rear Ventilated Facades have been used extensively throughout the world over many years to provide a natural, energy efficient method for cladding commercial and residential buildings.

A multi-layer construction, the system consists of a rainscreen cladding on the outer layer in combination with a frame, weather-resistant membrane, insulation, sub frame and a ventilated cavity.

A modern method of facade construction, rear ventilated facades are gaining momentum in Australia as developers, architects and builders understand the principles and advantages of rainscreen systems.

A differential between the temperature on the face of the cladding panel and the air cavity temperature creates a variation in air density, resulting in a "chimney effect" that produces upward airflow within the cavity.

As a safeguard, a weather-resistant membrane is attached to the building frame, providing an envelope. Under extreme weather conditions a minimal amount of water may pass through the joints.

Due to the ventilated nature of the system, this moisture will run down the back of the panel and drain out the bottom of the facade.

## Benefits of a ventilated facade / rainscreen cladding:

Rear Ventilated Facades with their inherent airflow provide several distinct advantages over other facade systems;

- Energy savings**
  - Up to 30%
  - Reduction in CO<sup>2</sup>
  - Greater internal comfort
- Hot climates**
  - Natural air-conditioning
  - Heat shield
  - A constant temperature
- Cold climates**
  - Reduces thermal losses
  - Enhances thermal bridging

The typical rainscreen system is based on natural rear ventilation. It is most reliable, sustainable and provides maximum longevity to exterior cladding.

Ventilated facade systems consist of four main components:

- 1 Support structure
- 2 Sub frame
- 3 Ventilated cavity
- 4 Cladding

1 Support structure	2 Sub frame	3 Ventilated cavity	4 Swisspearl® cladding
The exterior wall of a building is mainly made of concrete, CMU blocks, brickwork, steel or timber frame with studs and planked by gypsum boards.	Swisspearl® facade panels are installed on timber or metal supports.	The main task of the air cavity is the evacuation of moisture and excess heat. The air circulation occurs naturally thanks to the pressure difference between bottom and top.	The outer skin of the building envelope has two main functions; to be aesthetically pleasing as well as protecting against influences from climate and environment.

# Fixing details

## Horizontal fixing (Vertical joint)

## Vertical fixing (Horizontal joint)

# Sustainability

Manufactured with a high level of environmental awareness, you can feel good about choosing Swisspearl® high-density fibre cement panels. 100% environmentally friendly, both the raw materials and the production process contain no harmful substances. The fibre cement panels are made from 95% cement, pulverised limestone, water and air, while the manufacturing process uses a closed water cycle and a slow natural curing time, so it consumes far less energy than the production of most other building materials.
