MondoClad

NON-COMBUSTIBLE ALUMINIUM PANELS

MondoClad® is a 3mm solid aluminium panel that is coil coated with a PPG Duranar PVDF paint finish.

The superior PPG Duranar PVDF architectural paint finish ensures UV stability, colour retention and a product that will stand the test of time.

MondoClad® is CodeMark certified and has been tested to AS 1530.1 and AS 1530.3 achieving zero for ignitability and spread of flame.

MondoClad® has earned an Environmental Product Declaration (EPD), Global GreenTag PHD™ PlatinumHEALTH™, and GreenRate™ Level A certification through a rigorous, independent process by Global GreenTag International.

MondoClad® is available in five capital cities in Australia for efficient service and delivery. Our warehouses across Australia stock a variety of colours and finishes to fulfil your needs.

Our solid aluminium panels provide architects, designers, developers, builders, and contractors a premium solid aluminium façade panel, that is non-combustible and can be safely specified for commercial, educational, aged care and residential projects without compromising design.

Utilising a highly corrosive resistant marine grade alloy, MondoClad® is ideal for installation in the harsh Australian environment.

MondoClad

CERTIFIED TO LEAD

MondoClad® sets the standard for sustainable facades.

At HVG Facades, we support architects and builders with transparent, verified data to meet sustainability goals set by the Green Building Council of Australia and the Australian Government.

MondoClad® backs this with leading certifications, including an Environmental Product Declaration (EPD) that outlines its carbon emissions and life cycle impact. It also holds Global GreenTag's PHD™ PlatinumHEALTH™ certification for material health and the GreenRate™ Level A certification—the highest rating for sustainable sourcing and manufacturing.

These certifications offer clear insight into MondoClad®'s environmental performance, helping professionals make informed, responsible choices. By prioritising health, transparency, and sustainability, MondoClad® sets a new standard in premium cladding solutions.

MONDOCLAD® FEATURES

MondoClad® solid aluminium panels set a new standard in high-performance, quality facades.

Offered in an extensive range of colours, these pre-painted panels are coil coated and suited to a range of applications from high-rise and education to health care and residential developments. Exclusively supplied by HVG Facades, MondoClad® is now used in new constructions and the recladding of existing projects across Australia.

A product of enduring style

MondoClad®'s wide range of finishes and sizes means that even the most complex architectural designs can be achieved. Stocked locally in numerous colours and sizes, MondoClad® also offers custom colours and measurements on request.

MondoClad® is non-combustible, and can be easily fabricated into cassettes. This combination of low-maintenance and durability means that architects, designers, developers, builders and contractors can specify confidently without compromising design. The superior PVDF

architectural paint finish of MondoClad® also ensures UV stability and colour retention, so that architectural designs will stand the test of time.

A non-combustible solution that is designed to last

MondoClad® is categorically non-combustible, in accordance with AS1530.1 standards, which sets it apart from many other market offerings.

Utilising a corrosion-resistant, marine-grade alloy, MondoClad® is ideal for use in harsh Australian conditions. The high-quality, coil coated paint finish provides modern colour options with durable UV resistance and gloss retention.

Sustainable alternative to timber

MondoClad® premium solid aluminium panels come in a variety of woodgrain colours – a sustainable alternative to timber products.

Complete your project in one of our premium timber finishes that are maintenance free in a wide range of colour choices. Choose your next woodgrain project in a Blonde Pine, Honey Oak, African Teak, Cherry or Blackbutt.

BENEFITS

➤ 100% non-combustible to AS1530.1 and AS 1530.3

This means that MondoClad® is NCC compliant, streamlining the building approvals process.

➤ Sustainability

Certified sustainable with EPD, Global GreenTag PlatinumHEALTH™, and GreenRate™ Level A for transparency, health, and performance.

➤ Compliant to F3P1 for weatherproofing

MondoClad® has been tested to AS4284 and meets the criteria of the F3P1 Performance Requirement as part of NCC 2022.

➤ High-quality marine-grade aluminium

MondoClad® is designed to be corrosion resistant, meaning it will not oxidise, making it an ideal choice for all locations.

➤ Custom sizes, colours and finishes

MondoClad® offers custom colours and sheet sizes, including oversize sheets, to ensure your design is achieved.

➤ PVDF finish

Superior long lasting finish that is coil coated, with no cracking when fabricated.

➤ Easy to fabricate

When folding, routing and cutting.

➤ Competitively priced

MondoClad® is an affordable high-quality option.

➤ 20-year warranty

MondoClad® offers high colour retention and will not oxidise over time. Warranty available on application and subject to approval. Contact our sales team for further information.

➤ Stocked in Australia

As MondoClad® is stocked locally, there are reduced lead times for delivery.

➤ Technical support

Our team of industry professionals are available to provide their expertise and technical knowledge to assist in your product-related enquiries.

MondoClad

COLOUR SELECTION

MondoClad® is non-combustible, durable, and can be easily folded into cassettes, meaning that even the most ambitious creative vision can be realised.

Colour that lasts

The superior PVDF architectural coating of MondoClad® offers excellent UV stability and coil coated colour retention. MondoClad® offers a 20 year warranty, available on application and subject to approval.

Installation of metallic panels

To avoid possible differences in levels of light reflectivity, panels are best installed in the direction indicated on the protective peel-off foil.

Minor colour variations may occur between different production batches.

Confidence and certainty

Testing and installation of our MondoClad® solid aluminium panels was performed in order to satisfy stringent CodeMark requirements. Our premium solid aluminium cladding panels – MondoClad® will provide you with extra comfort and peace-of-mind knowing that it is CodeMark certified.

FABRICATION

MondoClad® sheets can be fabricated into panels using various techniques.

It is strongly recommended that you consult with machinery manufacturers and tool suppliers to secure the best fabrication result. We suggest that you conduct preliminary tests and trials prior to commencing the production of panels.

CNC Router

A V-groove with a flat base of 3mm is recommended to a maximum depth of 2.2mm. Spindle rotation speeds and feed rates are machine dependant and should be discussed with machine manufacturers. A lubricant mister is recommended when fabricating MondoClad®. For optimum fabrication results, we recommend consulting machine manufacturers and tooling supply companies.

Folding

After the V-groove has been formed, fold the return leg back in one movement. It is recommended that a portable folding tool be used for small panels and a folding machine/bed for larger format panels. The initial folded angle should slightly more than the final angle required.

Bending

As an alternative to V-grooving and folding MondoClad® can be formed into cassettes using a press brake to create the 90° bend.

Circular Saw

For best results, a track guided circular saw is recommended. It is important to discuss blade selection with manufacturer. Hand folding is generally achievable without the need for bending equipment. A depth gauge roller suitable for 3mm thickness may be required.

Vertical Panel Saw

This type of saw can cut and route MondoClad®. Please seek manufacturer's advice in the selection of an appropriate blade. Existing vertical saws can be retro fitted with a variable speed driver controller and lubricant misting equipment. When creating a V-groove for folding, the minimum thickness left in the bottom of the groove should be 0.7mm

Shearing

MondoClad® can be guillotined to the required size. Ensure the cut material is captured to prevent damage.

Roll Bending

To create curved surfaces, use a suitable bending machine. Safeguard the material by maintaining the protective film. Make certain the rollers are clean and dent-free. The minimum bending radius should be no more than 15 times the thickness.

Drilling

A high quality HSS centre point drill bit is suitable for drilling MondoClad®.

Fixing

You can rivet MondoClad® using blind and solid rivets. Always consider the effects of thermal expansion and potential building movement. Stainless steel screws should be used with all MondoClad® products. Always consider the effects of thermal expansion and the possibility of building movement.

Welding

The common methods for welding MondoClad® are TIG and MIG. It is recommended to consult with your local welding specialist for advice.

Perforating

MondoClad® can be perforated by punching, drilling or milling. Contact HVG Facades to discuss the pattern and open area you are seeking to achieve.

CLEANING INFORMATION

To maintain the appearance of the MondoClad® panels we strongly recommend regular cleaning with appropriate mild detergents ensuring that the detergent is thoroughly rinsed off the facade.

Never use cleaning products that are highly alkaline or acidic and avoid abrasive materials and paint dissolving solvents. Facades that are located near a marine or industrial environment may need more frequent cleaning periods.

The surface should be cleaned either manually using a soft brush or by means of a high-pressure cleaner (max. 50 bar) with clean water. If necessary, a mild cleaning agent (pH6-7) may

be added, up to a maximum of 10%. Cleaning should take place from top to bottom and should be continuously rinsed with clean water to remove any cleaning agent residue. Generally, we recommend trying out the cleaning agent on an unobtrusive part of the building to check whether the surface appearance is affected. Do not clean surfaces in direct sunlight or if the temperature is above 40°C. The quick drying may cause marks or stains.

TECHNICAL DATA SHEET

Properties	Units	Values
Alloy		5052
Standard thickness	mm	3
Painted weight	kg/m²	8.31
Raw density	kg/m³	2680
Indicative minimum radius	mm	4.5

SUSTAINABLE
MANAGEMENT AND RECYCLING
PROGRAM TARGETING
ZERO CARBON FOOTPRINT

HVG Facades is proud to be a leading supplier of recladding materials to the Australian construction industry.

In response to the mandated removal of all non-compliant polyethylene (PE) cladding, it is estimated that the amount of waste generated by the removal of this cladding will exceed 20,000 tonnes.

HVG Facades is committed to reducing the impact this waste will have on our environment and as a result we have partnered with approved recycling experts to develop EnviroSmart®.

EnviroSmart® is a program that seeks to address a significant need in the construction industry, in a sustainable manner that contributes to the future health of our planet. This program is an end-to-end solution that provides a cost

effective and safe way to remove and recycle aluminium composite panels. As a completely transparent solution, EnviroSmart® can provide certified documentation of the entire process.

Making recladding even greener

Now, in addition to recycling and reusing non-compliant aluminium cladding, we've gone one significant step further and teamed up with Carbon Positive Australia to plant trees and help restore the Australian landscape.

For every qualified project, where non-compliant cladding is removed and recycled using the EnviroSmart® program, HVG Facades will donate and plant trees on your behalf with Carbon Positive Australia.

A registered Australian charity working to combat climate change and restore habitats, Carbon Positive Australia plants native trees and shrubs on unused and degraded land to restore the natural habitat. Over their 20-year history, they've restored almost 5,000 hectares of land across Australia.

HIGH QUALITY MARINE GRADE ALUMINIUM | PVDF FINISH | EASY TO FABRICATE

Stocked in Australia in a range of colours, shades and sizes. MondoClad® panels offer high colour retention and do not oxidise over time. Custom sizes can also be provided upon request.
